

## **No. 20 MJT Front Sight**

The Lyman No. 20 MJT Front Sight that is provided with (7) interchangeable inserts as a companion to the No. 90 MJT receiver sight is an excellent combination for both target shooting and general use.

## **To Install The No. 20 MJT Front Sight**

1. To remove the Front Sight in place on your firearm: Use a non-marring brass drift to tap out the factory front sight. (Left to right as viewed from the receiver)
2. Align the No. 20 MJT and tap into place from right to left.
3. If the fit of the sight in the dovetail is too loose, remove the sight and peen down the lips of the dovetail slot lightly and evenly. Try the sight again. Repeat until the sight is snug.
4. If the front dovetail slot is too small, it will have to be opened with a triangular file. This condition is common with imported rifles and you may wish to have a gunsmith fit the new front sight.

Seven Anschütz compatible inserts are included with the No. 20 MJT. Five disc types with the following aperture diameters: .126 (3.2mm), .133 (3.4mm), .154 (3.9mm), .161 (4.1mm), .169 (4.3mm) and two post types .067 (1.7mm) and .102 (2.6mm).
